CAPS and SecureAgent Business Partnership Expands Mid Range and Mainframe Colocation, Disaster Recovery and Business Continuity Solutions

SHELTON, CT and TULSA, OK (July 20, 2009) – SecureAgent Software and Computer Alternative Processing Sites (CAPS), Inc. today announced a business partnership, which will provide strategic data recovery and backup solutions for mid range and mainframe system owners and will offer strategic advances in the approach to data management. The companies jointly will make available the Secure Data Solution® enhanced backup and recovery program. The combination of CAPS’ managed services and SecureAgent’s patented technology will create a game-changing services offering fully compatible with colocation, disaster recovery and business continuity needs.

The patented SecureAgent disk-to-disk technology delivers increased service levels, reliability and productivity. The elimination or reduction of tape mounting time, physical tape stock, tape drives, maintenance, off-site tape storage and logistics reduce user costs. Proprietary software features insure secure data compression and encryption at the highest legal levels throughout the process. This safer, faster system makes traditional tape backup obsolete.

A communications controller by SecureAgent consolidates secure remote user access connectivity from any location with remote console control features that include data encryption, data compression, Request-Challenge-Response user authentication and remote recovery system.

SecureAgent has earned not only an impeccable reputation as a pioneering data services solution provider, but also has been awarded more than a dozen U.S. and European patents. SecureAgent data management applications are in use throughout the United States and in Europe. They are a preferred solution for the world’s largest banks, communication companies and tier-one outsourcers.

“Our SecureAgent business partnership expands CAPS’ data services offerings across all platforms - open system plus mid and mainframe operations - to deal with the critical need for scalable sophisticated data management systems. Now we better fulfill all needs for assurance in the areas of regulatory requirements, secure and encrypted environments, recovery and cost savings,” said Peter J. Messina, senior vice president and chief operating officer of CAPS.

“By building solutions to our customers’ problems into our product, we effectively added the benefits of data retrieval and disaster recovery/business continuity to their data center management tools,” said R. Brent Johnson, president of SecureAgent Software.

CAPS has a decade-plus of dedicated expertise in products and services for IT infrastructure, colocation and workstation facilities for real-time operations, disaster recovery and business continuity. Secure SAS 70 Type II facilities in Shelton, Connecticut serve the Boston-New York business corridor; its 56,000 square-foot facility in Duluth, Georgia serves metro Atlanta and the surrounding states. CAPS full product range includes data centers, data storage, managed services and managed security services, consulting, technology integration, mobile recovery, digital networking and infrastructure support. Forrester Research named CAPS a “strong performer” in its Disaster Recovery Service Providers, Q1 2008 Wave Report.
